## **CONTENTS:**

- 1. Application**
- 2. Parameters of complex**
- 3. Components of complex**
- 4. Test results**

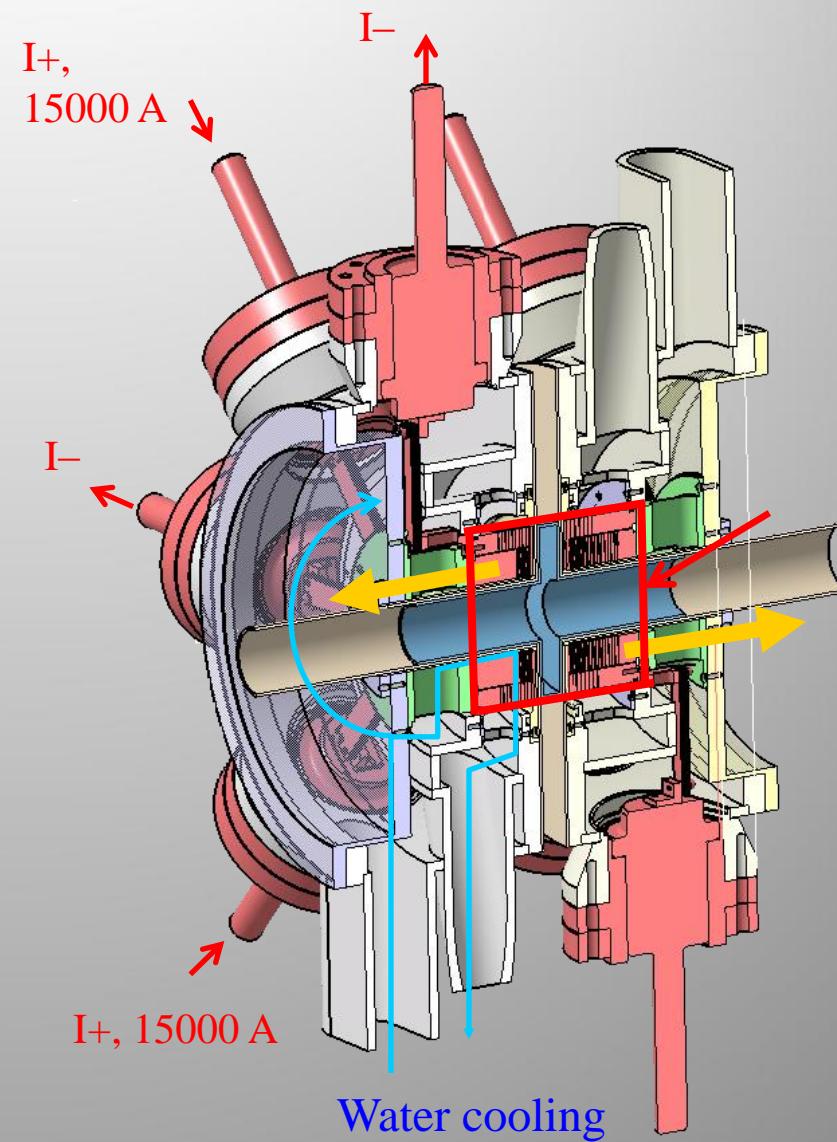

## 60 GHz ECR ion CAD

60 GHz ion source

Magnetic cusp

# Parameters of gyrotron complex (contractual)

<b>Operating frequency</b>	<b>60 GHz</b>
<b>Output power</b>	<b><math>\leq 300</math> kW</b>
<b>Regime of gyrotron oscillation</b>	<b>pulse</b>
<b>Accelerating voltage</b>	<b>&lt;60 kV</b>
<b>Anode voltage</b>	<b>&lt;20 kV</b>
<b>Beam current</b>	<b>&lt;18 A</b>
<b>Maximum pulse duration</b>	<b>10 ms</b>
<b>Max freq. of pulse repetition</b>	<b>10Hz</b>
<b>Efficiency</b>	<b>&gt;45%</b>
<b>Output mode</b>	<b>waveguide operating mode</b>
<b>Number of harmonic</b>	<b>1</b>
<b>Type of the magnet</b>	<b>cryomagnet</b>

## Components of gyrotron complex

- gyrotron
- cryomagnet
- bench
- calorimetric load
- matcing optics unit
- RF quasioptical tract
- power supplies
- control system

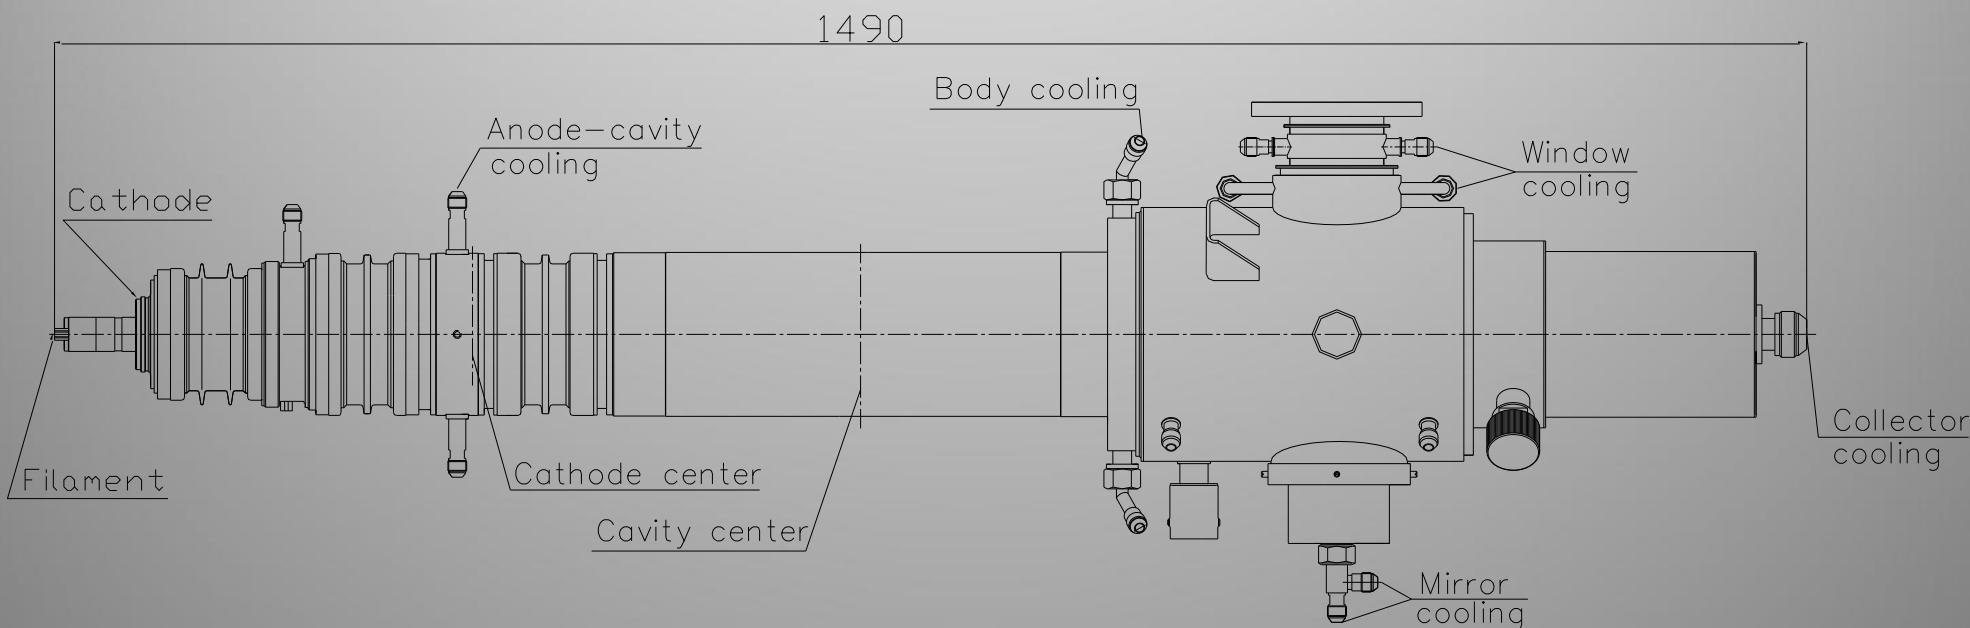

# Gyrotron design

## Design features:

- diode-type electron gun with high temperature LaB<sub>6</sub> cathode
- stainless steel body cooled by water
- boron nitride output window with diameter 66 mm
- recuperation of the residual energy of the electron beam
- quasi-optical converter with Gaussian wavebeam output

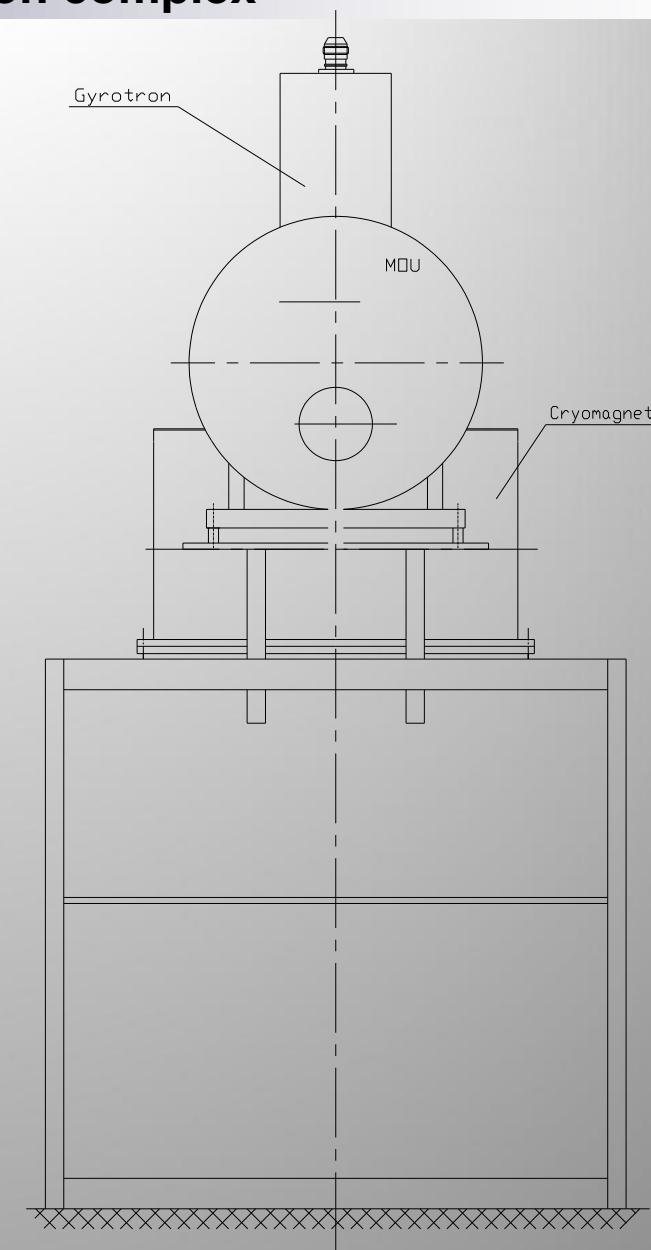

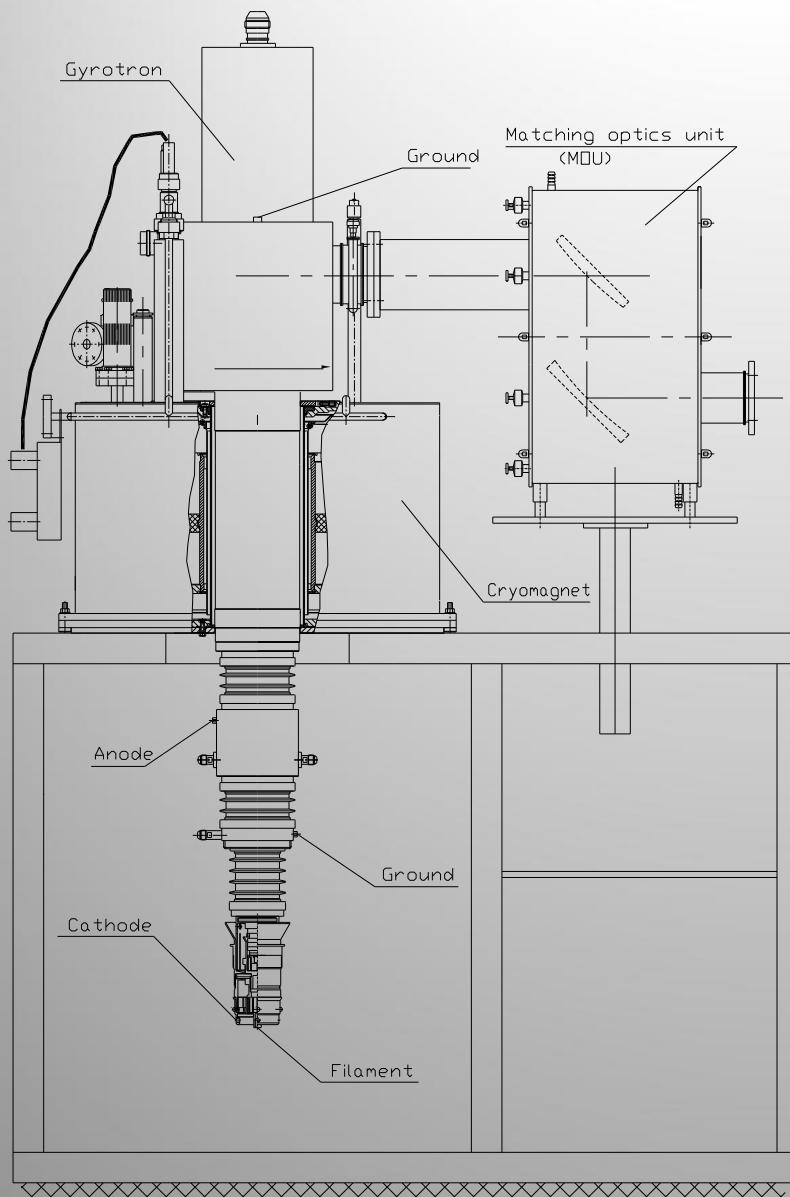

## Design parameters:

Operating mode	H7,3	Cathode voltage	-39 kV
Cathode diameter	45mm	Anode / cavity voltage	+19 kV
Beam current	18 A	Magnetic field	~2.3 T

# Components of gyrotron complex

## Gyrotron complex in Grenoble (France)

# Test results

## Output parameters

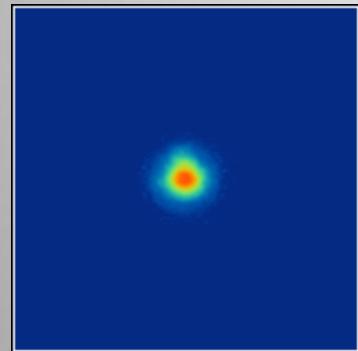

Power	303 kW
Cathode voltage	39.8 kV
Anode voltage	20 kV
Beam current	17.5 A
Anode current	52 mA
Frequency	60.089 GHz
Efficiency	45%
Pulse duration	50 ms
Magnetic field	2.26T

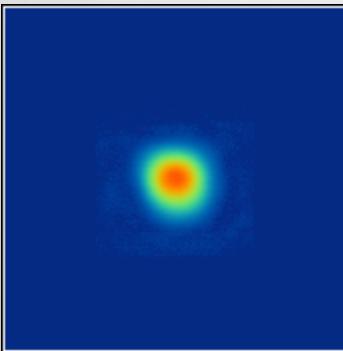

## Experiment vs. Simulations

(field amplitude; aperture 340×340mm<sup>2</sup>)

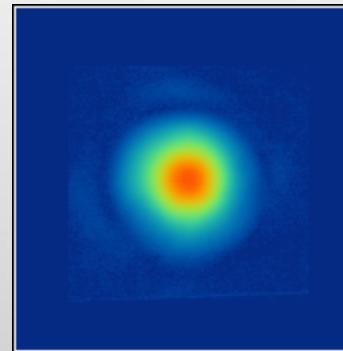

Z, mm: 40

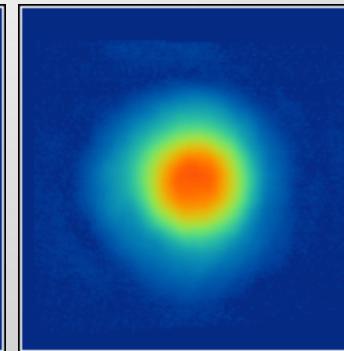

290

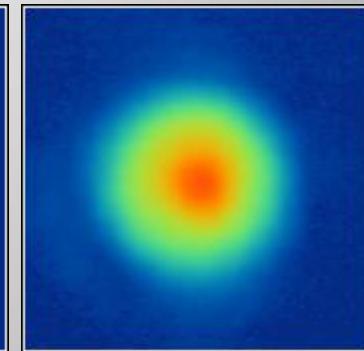

490

690

890

$\eta_a$ , %: 97.47

### Designations:

Z – distance to window

$\eta_a$  – mutual power between measured and simulated amplitude patterns

TEM<sub>00</sub> content in the reconstructed field:  $\eta_{a,\phi} = 97,79\%$
