Racano, U. Ratzinger, A. Sauer, A. Schempp, M. Shaaban, A. Sokolov, M. Steck, M.
Stenersen, T. Stöhlker, W. Vinzenz, M. Vogel,
G. Vorobjev, C. Will, D. Winters, A. Wolf, O. Zurkan
and the HITRAP collaboration

Darmstadt

Frankfurt

Heidelberg

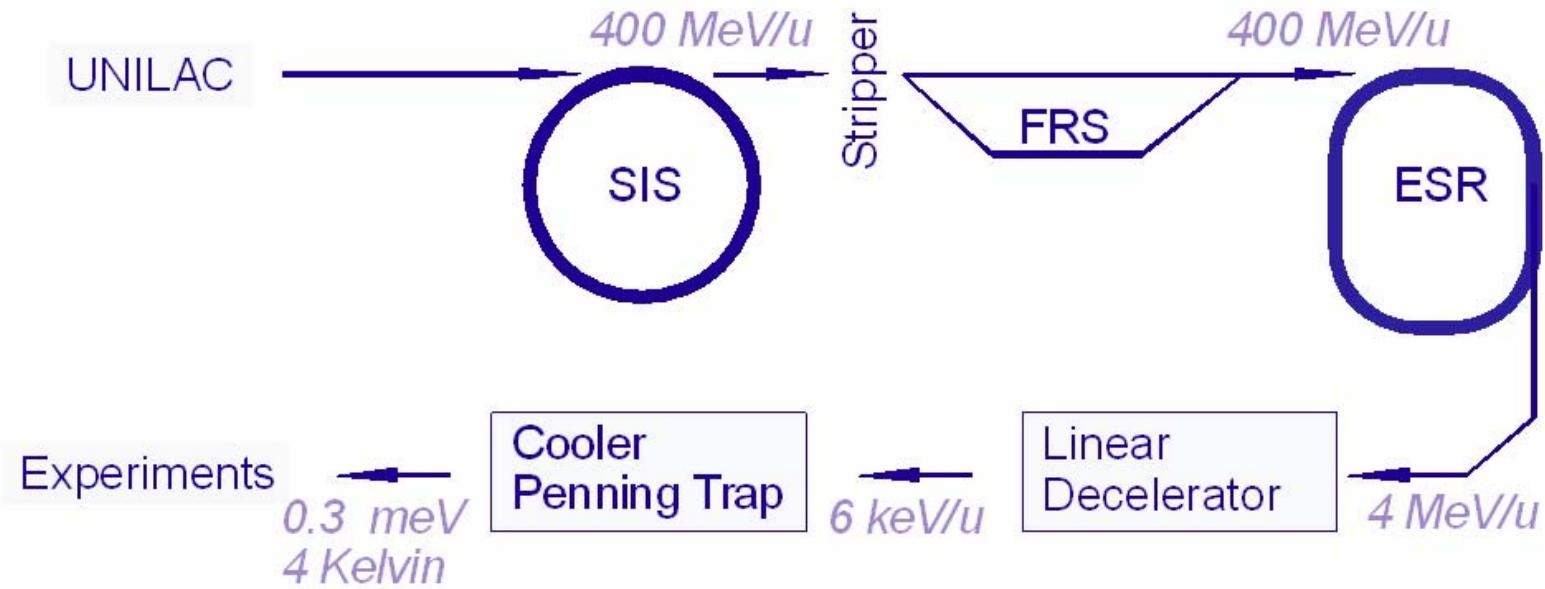

Mainz

Groningen

HITRAP – Production of slow HCl

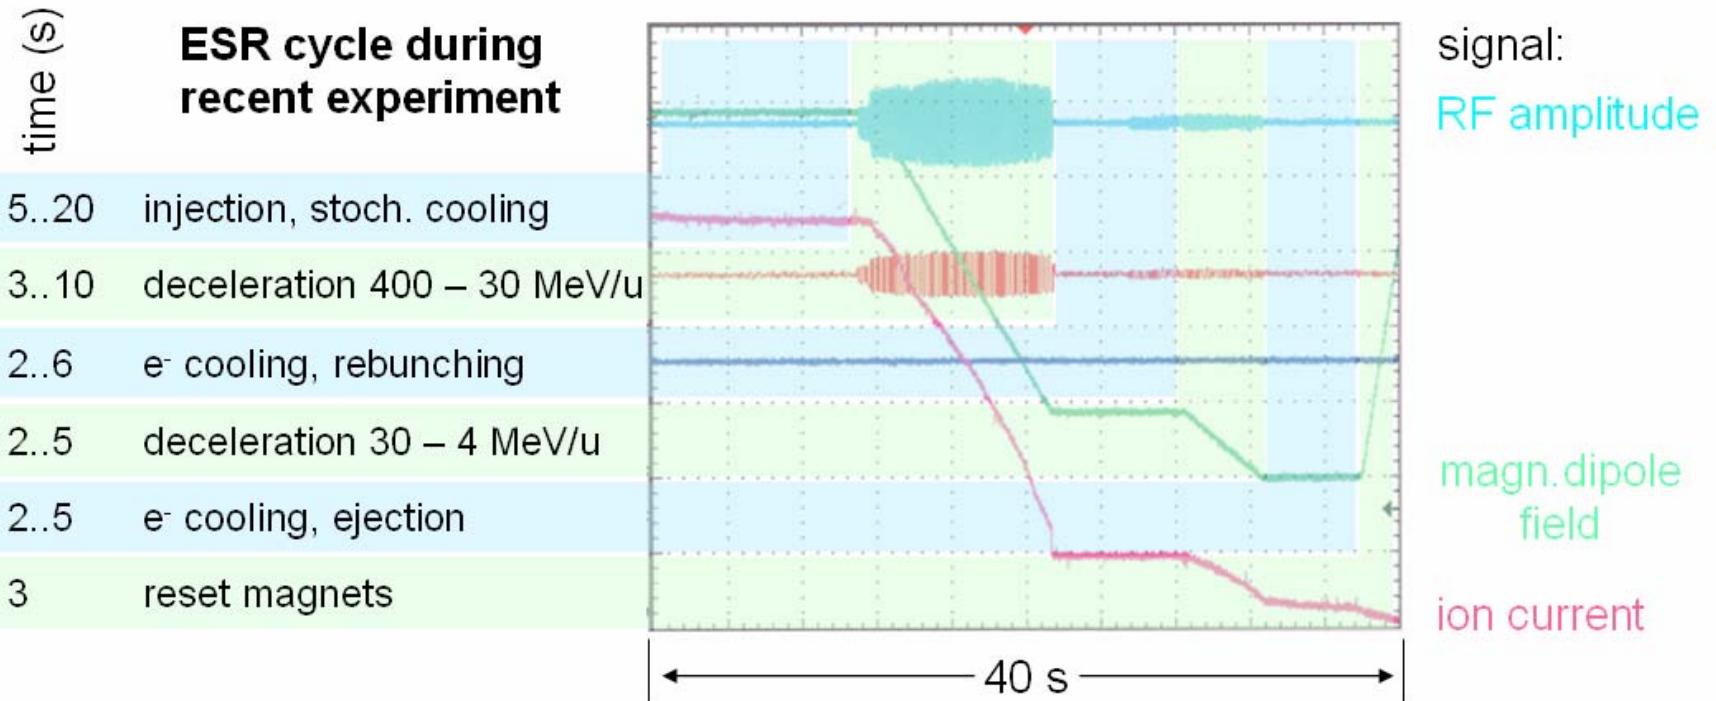

- g-factor of the bound electron
- hyperfine spectroscopy with laser light
- collision studies highly-charged ions (HCl) – atoms
- high-precision mass measurements
- highly-charged ions (HCl) - surface interactions
- hollow atom spectroscopy

ESR – From 400 to 4 MeV/u

ESR – Experimental Storage Ring at GSI with stochastic and electron cooling

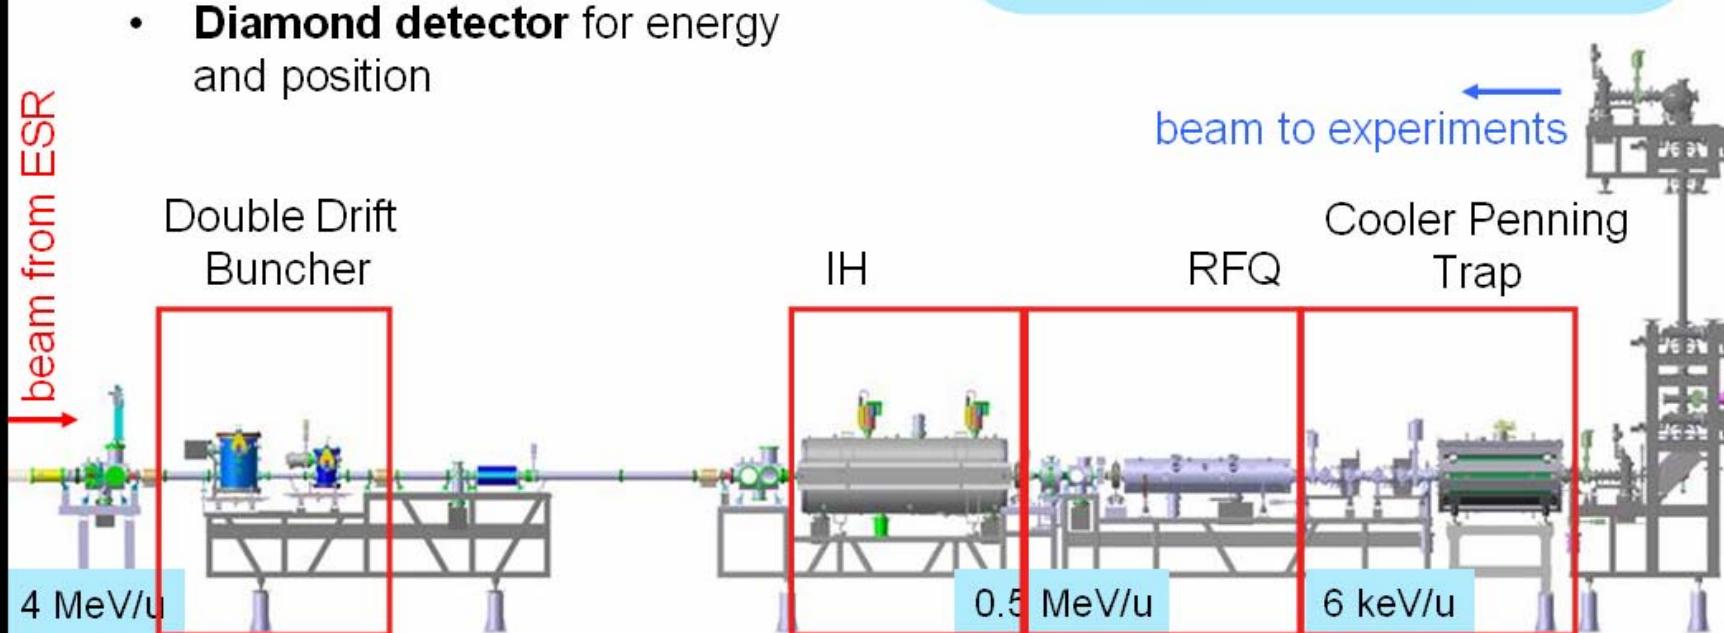

HITRAP – Linear Decelerator

Instrumentation for beam diagnostics

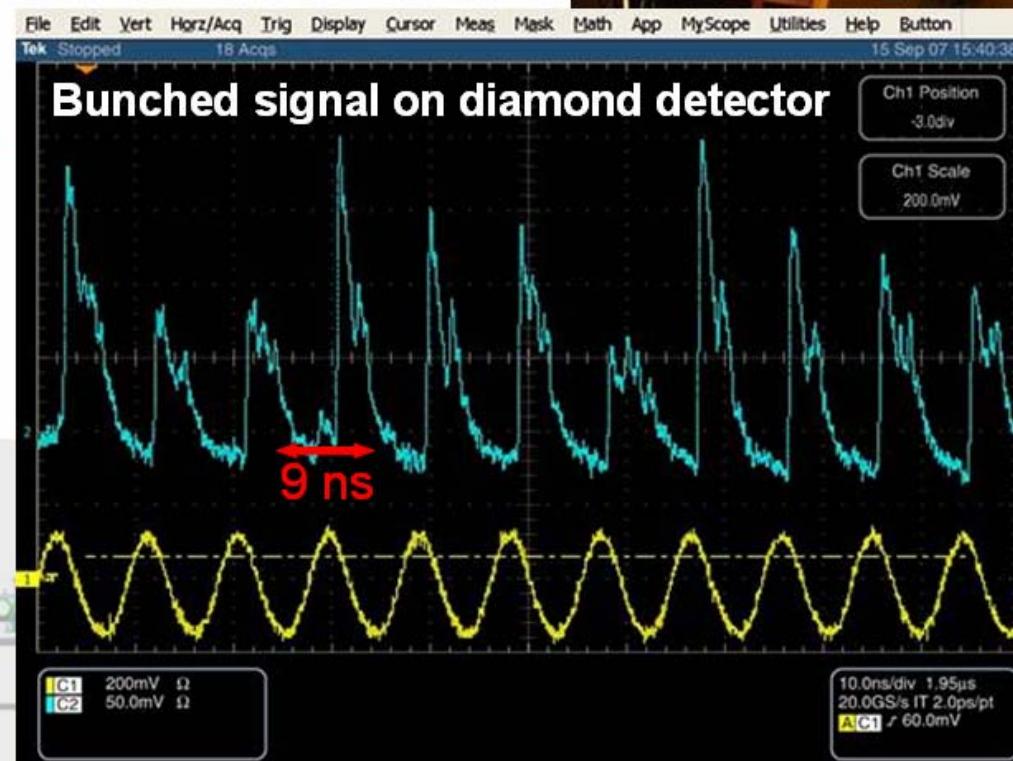

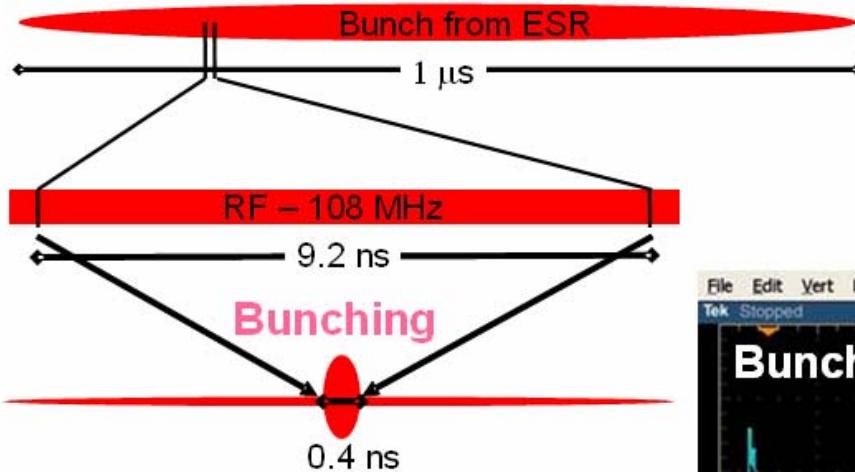

- Scintillation screens based on YAG single crystals
- Capacitive phase probes
- Wire grids
- Faraday cups
- **Diamond detector** for energy and position

Beam that will be available to users:

type	$A/q < 3$ ($U^{92+} \dots$)
ions/pulse	10^5
energy	keV/q ... meV/q
energy spread	≥ 0.3 meV

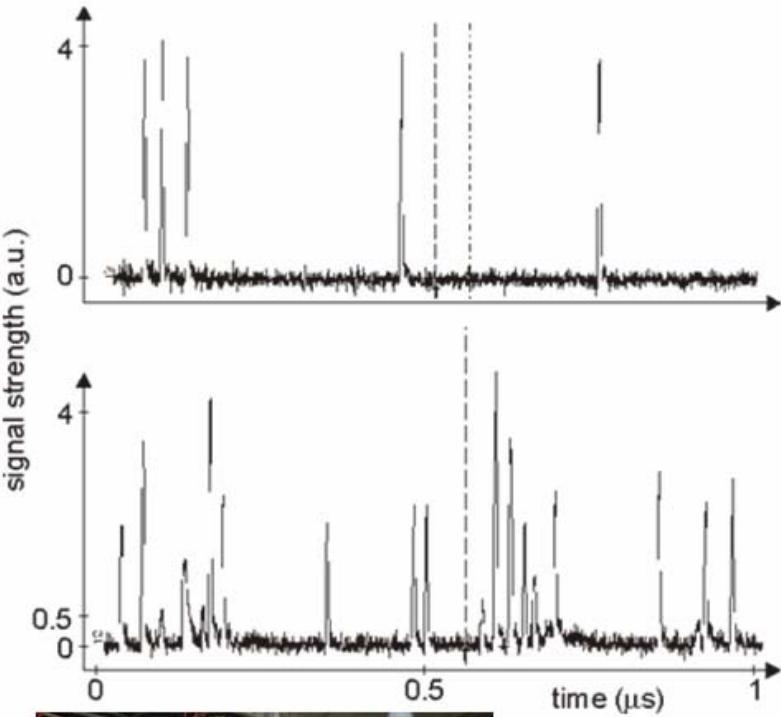

HITRAP – Double Drift Buncher

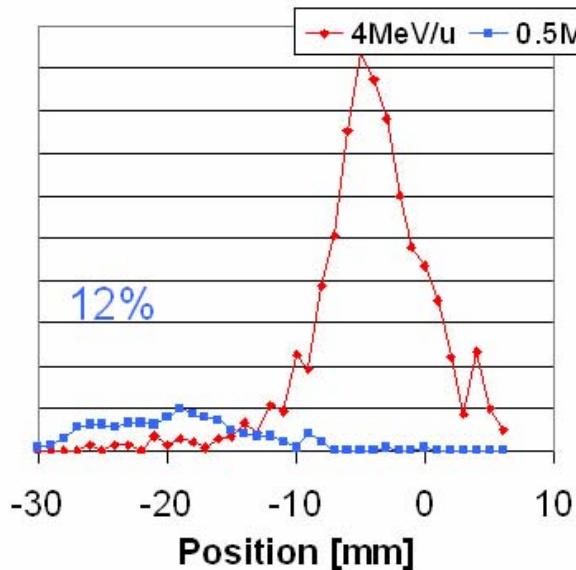

HITRAP – IH Structure

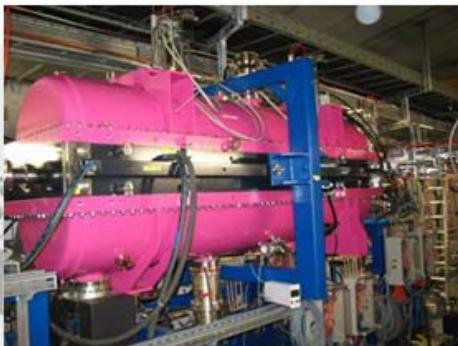

single ions signal on diamond

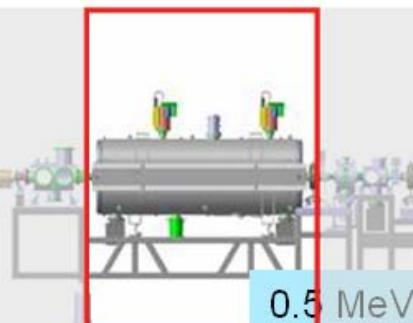

counts

beam profile on diamond

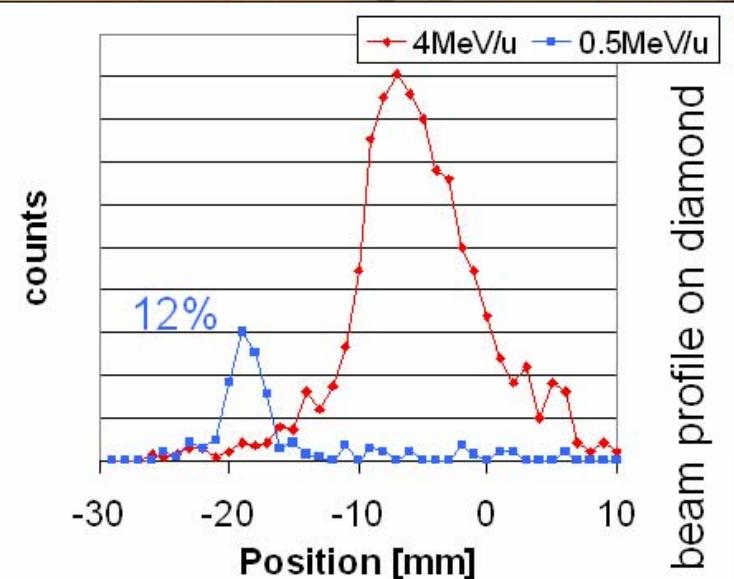

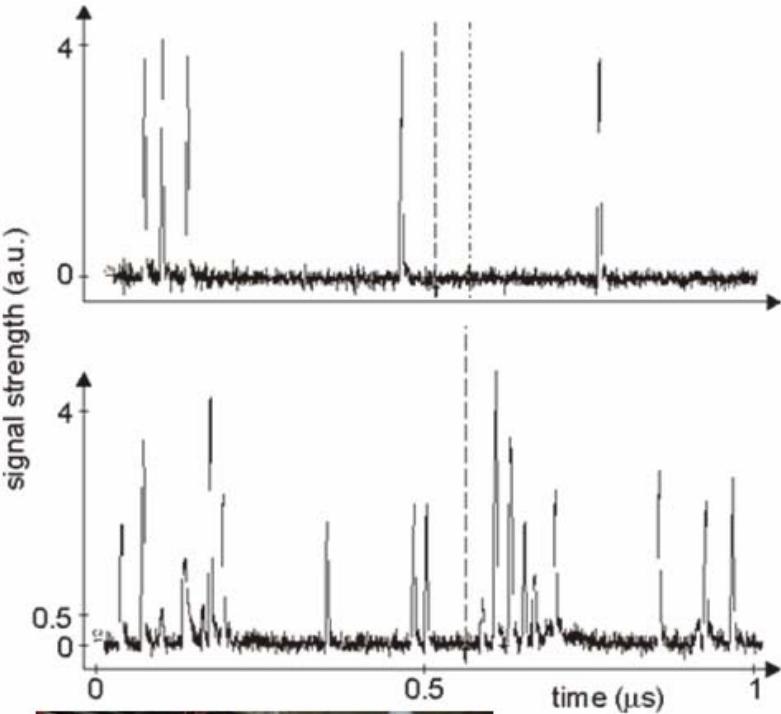

4 MeV/u

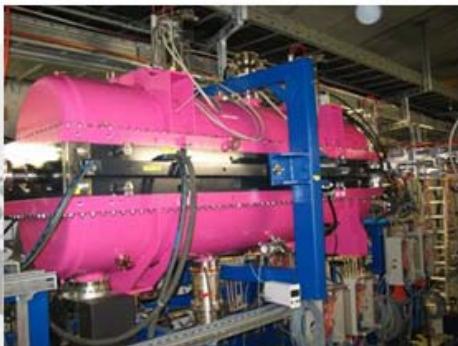

0.5 MeV/u

HITRAP – IH Structure

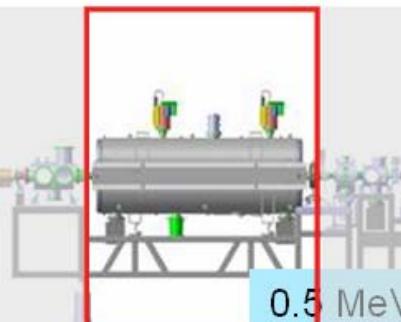

single ions signal on diamond

beam profile on diamond

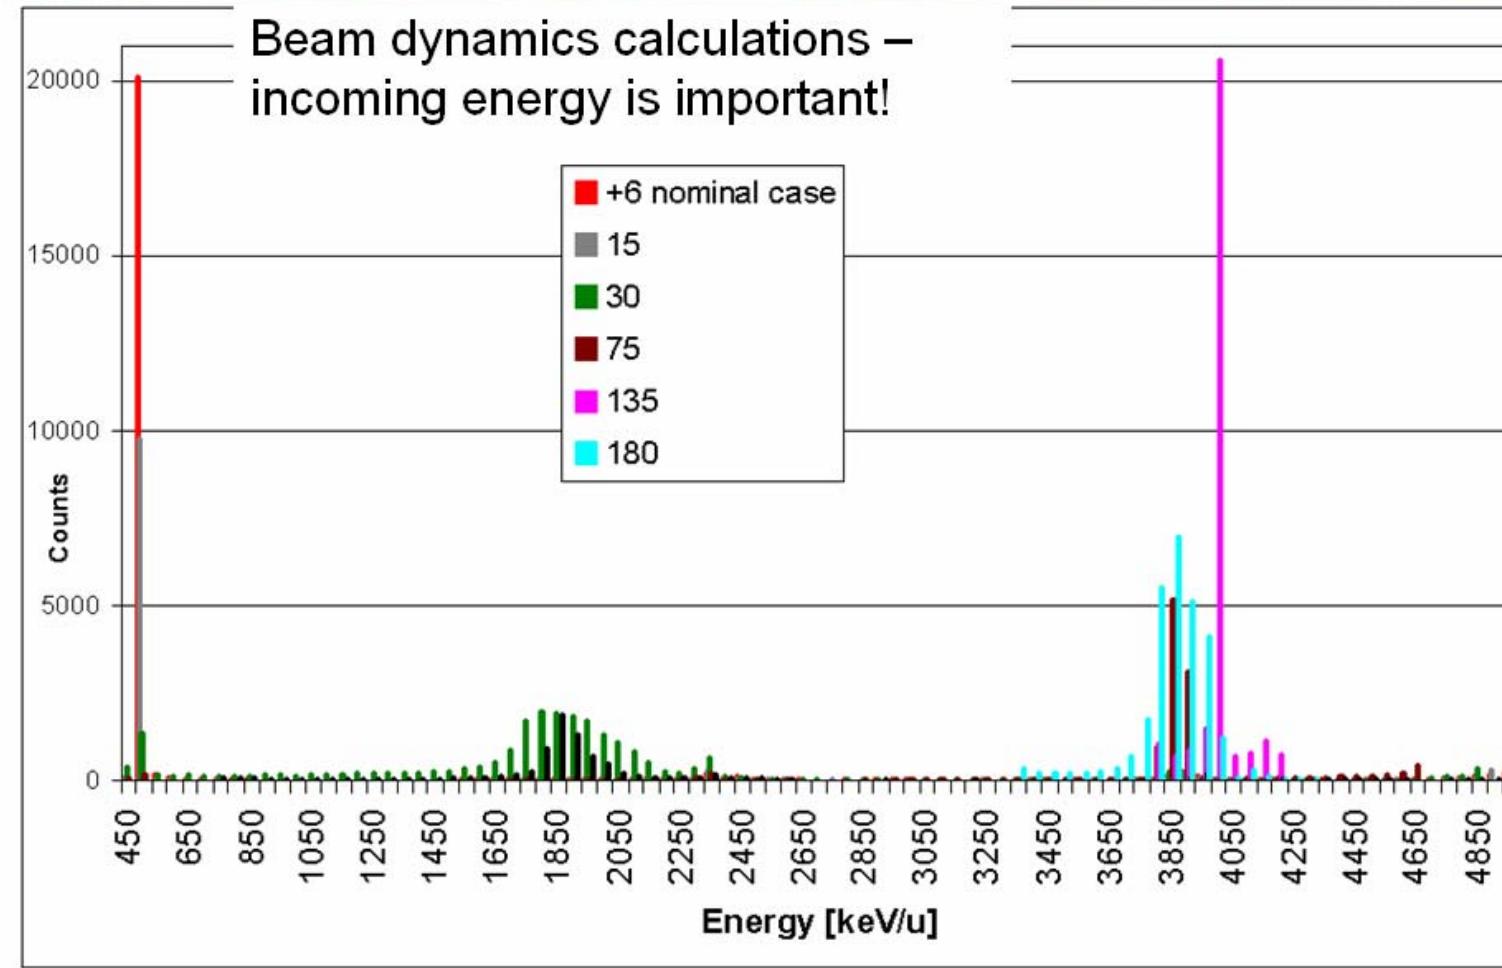

4 MeV/u

0.5 MeV/u

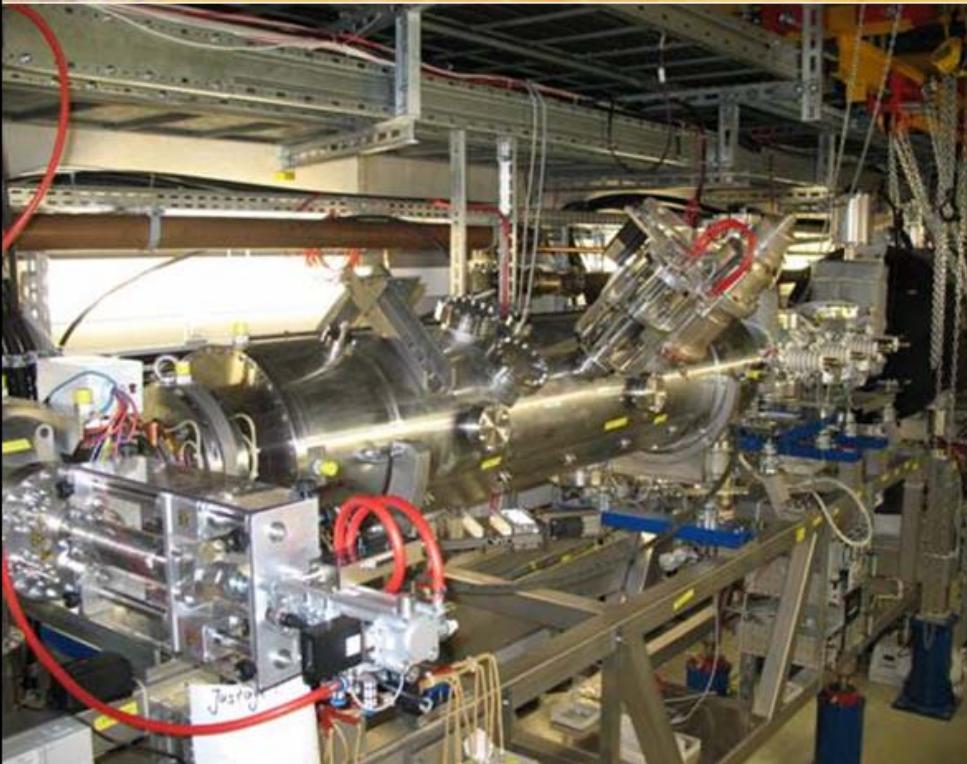

IH Structure – Energy Spectrum

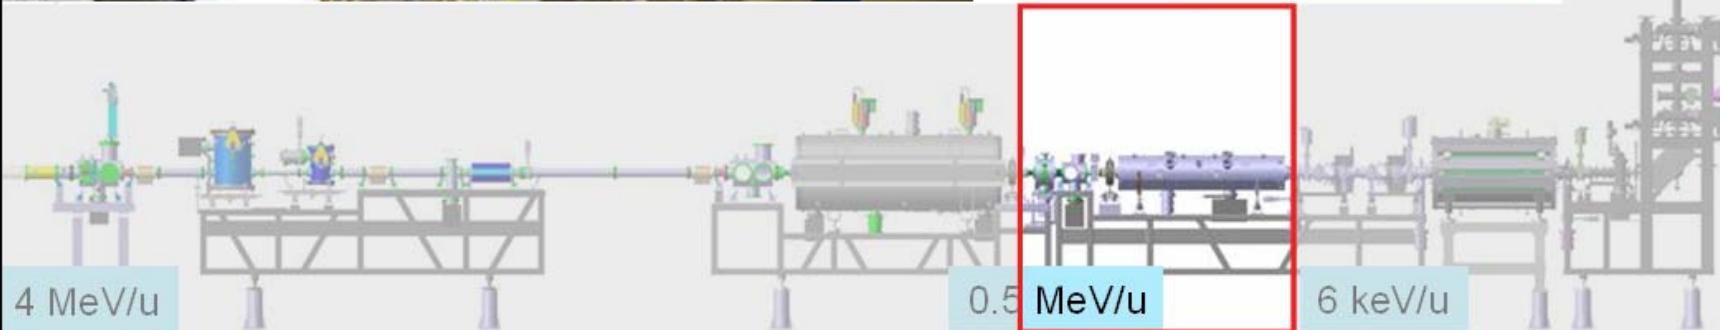

G. Clemente

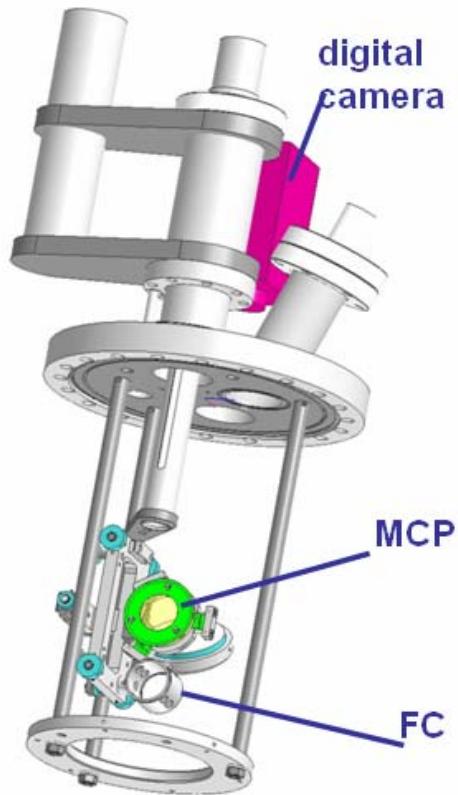

HITRAP – ReBuncher & RFQ

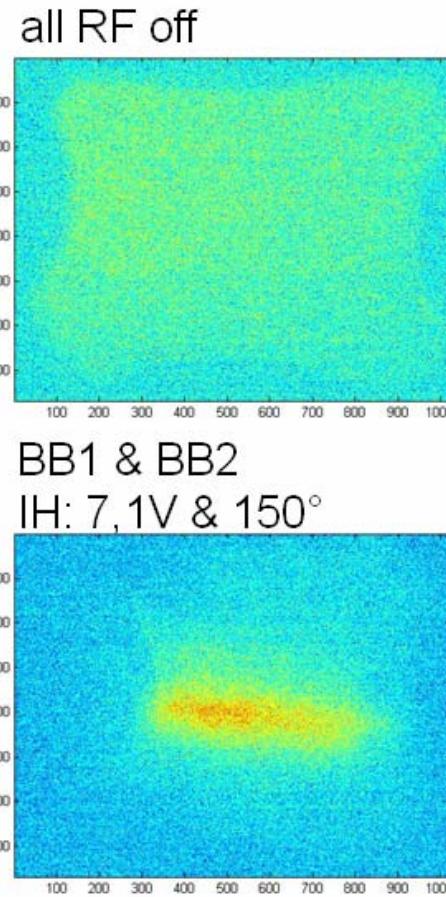

- deceleration from 0.5 MeV/u to 6 keV/u
- installed

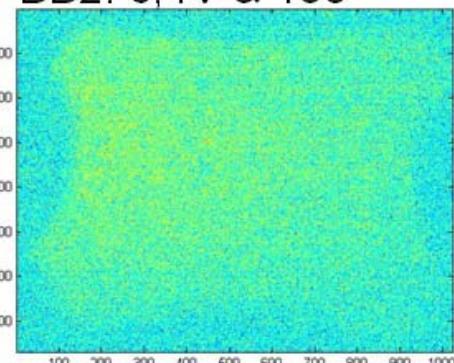

First Beam behind RFQ

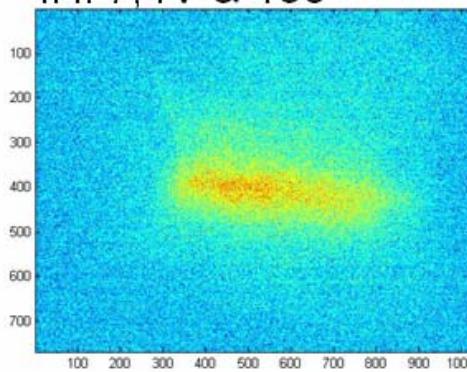

low energy, low intensity
MCP-based imaging detector

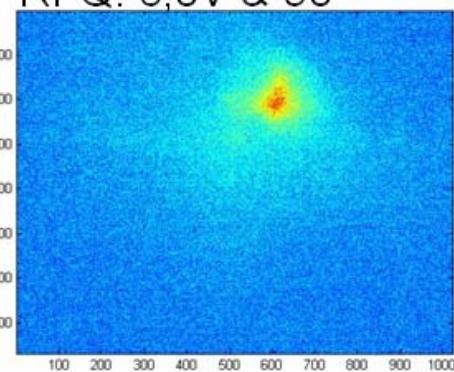

BB1: 8,5V & 0°
BB2: 6,1V & 150°

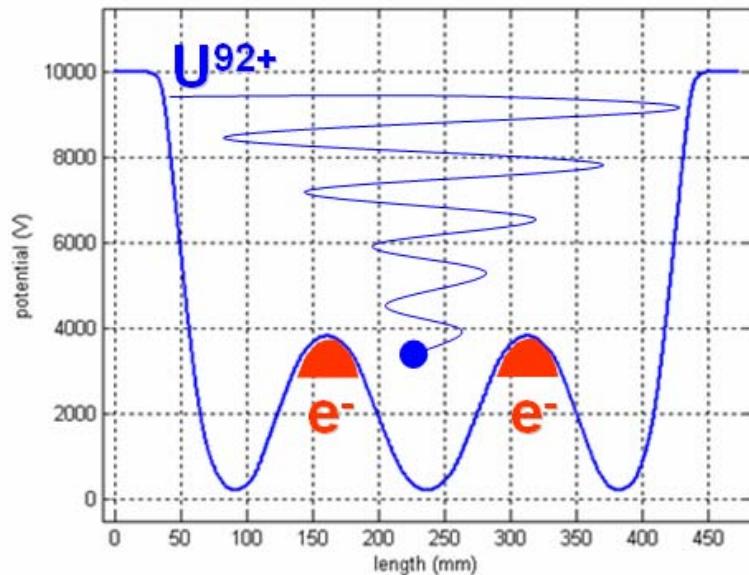

BB1 & BB2
IH: 7,1V & 150°

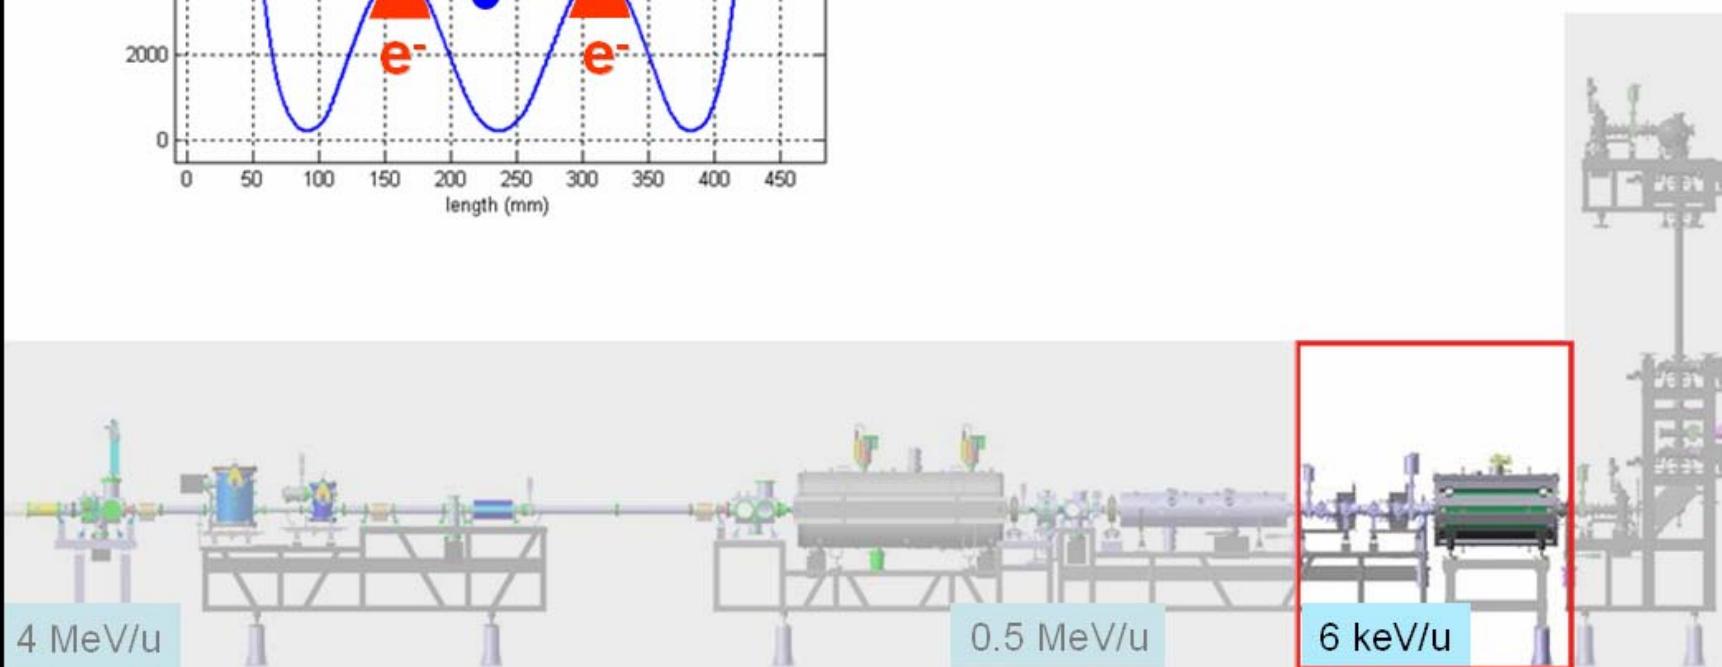

BB1, BB2 & IH
RFQ: 6,0V & 90°

HITRAP – LEBT & Cooler Trap

- catch the ions in flight
- cool them with combined electron and resistive cooling to ~ 4 Kelvin

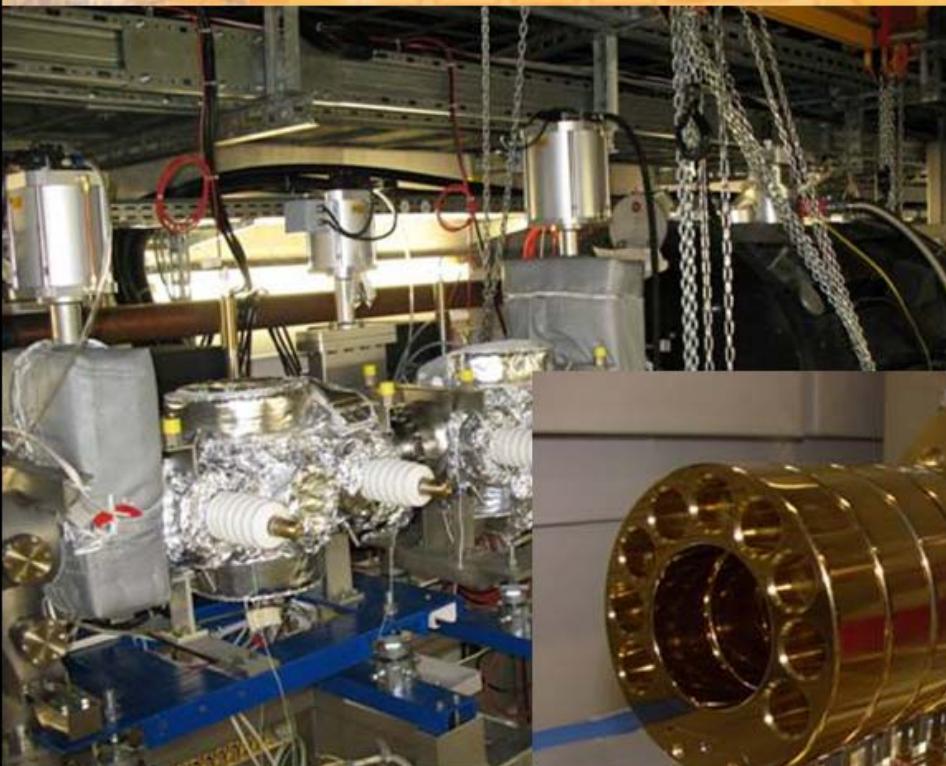

HITRAP – LEBT & Cooler Trap

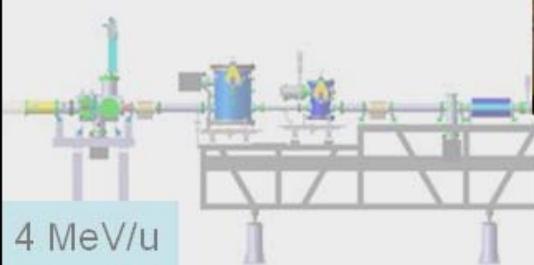

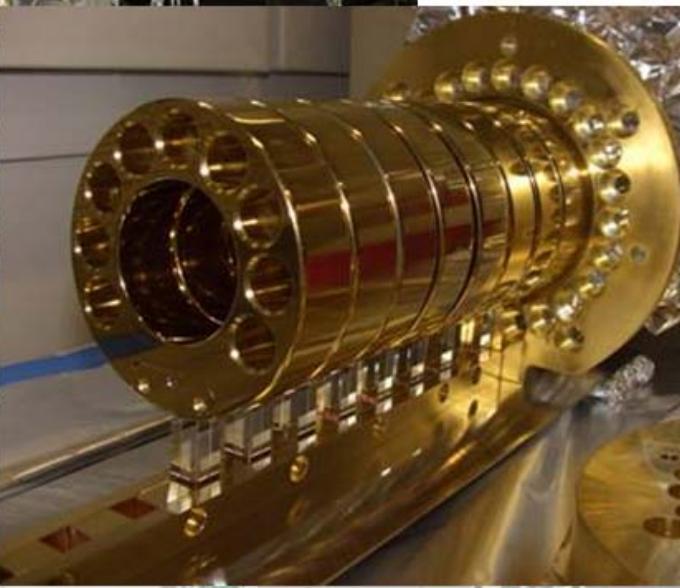

- LEBT installed, trap magnet installed and tested
- trap electrodes ready, assembly in progress

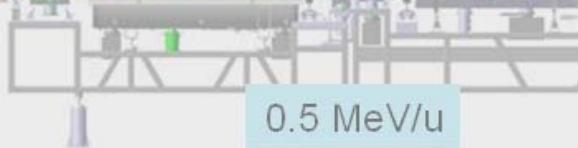

HITRAP – LEBT & Cooler Trap

- LEBT installed, trap magnet installed and tested
- trap electrodes ready, assembly in progress

4 MeV/u

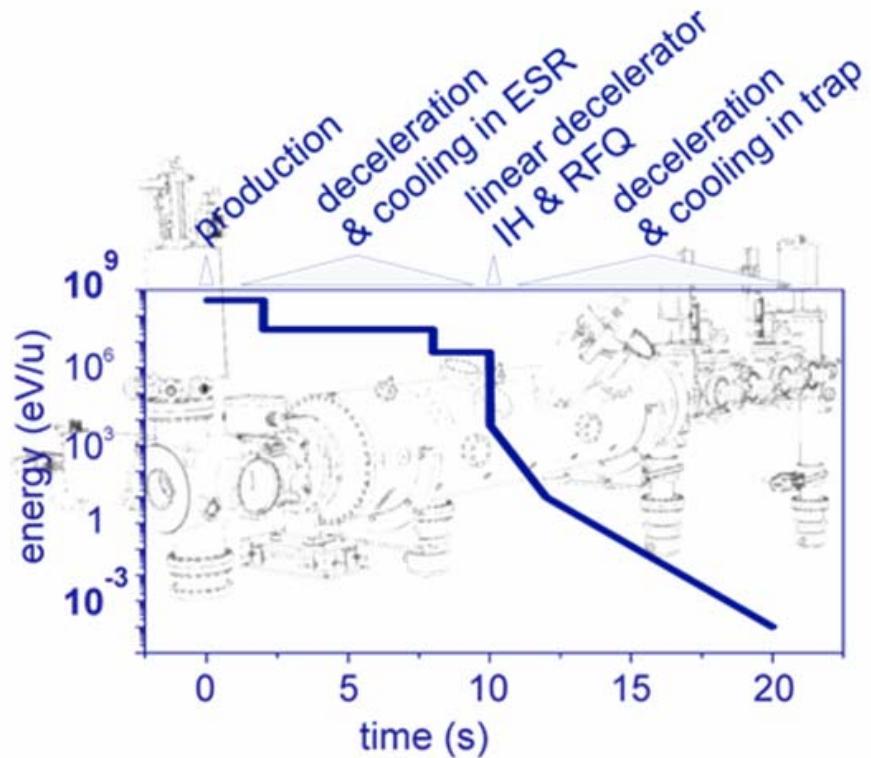

0.5 MeV/u

6 keV/u

Summary

- HITRAP will be the strongest source for heavy, highly-charged ions
- A linear decelerator has been constructed – key components are an IH, a RFQ and a Penning trap
- First deceleration has been achieved

Summary

- HITRAP will be the strongest source for heavy, highly-charged ions
- A linear decelerator has been constructed – key components are an IH, a RFQ and a Penning trap
