

An Uninterruptible Power Supply for the SRS,
S.A. GRIFFITHS, S.J. HANDS and D.E. POOLE,
CLRC Daresbury Laboratory, Warrington WA4 4AD,
UK - The deterioration in the public electricity supply
to the site in recent years has led to the recovery time
from short mains interruptions becoming one of the
major causes of downtime of the SRS. Two
uninterruptible power supplies, operating in
conjunction with diesel generator sets, have been
introduced to reduce the downtime. This paper
describes the design, installation and early operating
experience of the system.
