MATYUSHEVSKY, V.A. MIKHAILOV,

S.A. NOVIKOV, A.Y. STARIKOV, JINR, Dubna,
Russia - Advance in the production of the electrostatic
septum, the first stage of a deflecting system, and the
second stage consisting of two Lambertson magnets
with SC windings is described. The proposed method
and developed technology allow one to decrease the
leakage magnetic fields disturbing a circulating beam
from five to six times. Features of the bump coils for
the dipoles with a wide aperture are described as well.
